

miniHatch INFO SERIES

CANDLING GUIDE

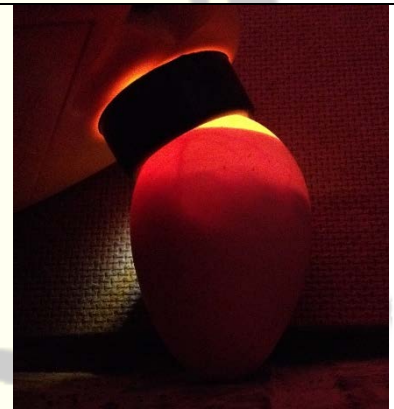

The following images show the development as you should see it during the incubation period on the prescribed days. These images were taken using a Brinsea™ Ova-Scope and Standard Ova-View Egg Candler. Use these images to monitor the eggs in your classroom. Remember that you may see a variation of what is pictured due to varying shell densities.

Day 0 – A fresh egg.

Day 6 of Development

Day 13 of Development

Day 19 of Development

This egg stopped developing within the first week of the incubation process.

This egg never actually developed or was not fertilized.

Remember, always wash your hands and clean all surfaces that contact poultry products!
